Specification

Please amend the paragraph beginning on page 5, line 30 to read:

When the lubricant is applied, another timestamp will be entered for the carrier 55. The method of the invention includes planning to put the disks into tape polishing as soon as possible. As a safety control, the computer should be programmed to reject the carrier for tape polishing if a predetermined time has been exceeded exceeded 56. The glide test follows the tape polishing with no special timing required 57.
